

Synopsis of CyberSecure Website

CyberSecure – Cybersecurity Awareness and Learning Platform

Introduction

CyberSecure is a responsive cybersecurity awareness website developed using HTML, CSS, and JavaScript. It helps users learn about cyber threats, online safety practices, and secure digital habits through interactive tools, quizzes, and security tips in a simple and user-friendly manner.

Objective

The main objective of CyberSecure is to provide users with basic cybersecurity knowledge and practical tools that help them stay safe online. The website aims to improve awareness regarding cyber attacks, password security, phishing scams, and safe browsing practices through interactive learning methods.

Technologies Used

- I. **HTML**– Structure and content of the website
- II. **CSS** – Styling, responsive design, animations, dark/light mode
- III. **JavaScript** – Interactivity, DOM manipulation, password tools, and dynamic content generation

Features of the Website

1. Home Page

The homepage introduces users to cybersecurity concepts with an attractive hero section, animated cyber attack counter, and explanation of the CIA Triad:

- I. **Confidentiality**
- II. **Integrity**
- III. **Availability**

2. Cyber Threats Section

This section displays different types of cyber threats such as:

- I. Phishing
- II. Ransomware
- III. SQL Injection
- IV. DDoS Attacks
- V. Keyloggers
- VI. Brute Force Attacks

Each threat includes:

- I. Description
- II. Prevention tips

- III. Severity tags

3. Security Tools

CyberSecure provides multiple interactive security tools:

- I. Password Strength Checker
- II. Random Password Generator
- III. Browser Information Viewer

These tools help users understand practical cybersecurity concepts.

4. Security Tips Section

This page provides simple cybersecurity best practices such as:

- I. Never sharing OTPs
- II. Using strong passwords
- III. Verifying suspicious links
- IV. Updating software regularly

5. Dark and Light Mode

The website supports both dark and light themes for better user experience.

6. Responsive Design

CyberSecure is fully responsive and works on desktops, tablets, and mobile devices.

Working of the Project

The website uses JavaScript for dynamic page navigation, animations, password analysis and data storage. Arrays and objects are used to store cybersecurity content, which is dynamically displayed using DOM manipulation.

Advantages

- I. Easy to use and beginner-friendly
- II. Interactive learning experience
- III. Improves cybersecurity awareness
- IV. Responsive and modern UI design
- V. Includes practical security tools

Conclusion

CyberSecure is an educational cybersecurity website built using front-end web technologies. It helps users learn about online threats and promotes safe digital practices through interactive and user-friendly features.
